Expected Graduation: December 2028

EDUCATION

Massachusetts Institute of Technology — Cambridge, MA
BS in Artificial Intelligence and Decision Making (Course 6-4) — *Expected December 2028*

- **Coursework:** Intro to Programming and CS (6.1000), Math for Computer Science (6.1200), Linear Algebra (18.06); Fall 2026: Probability & Inference (6.3800), Fundamentals of Programming II (6.1010)
- **Activities:** MIT Undergraduate Research Opportunities Program (UROP), WMBR 88.1FM Radio, MIT Live

WORK & LEADERSHIP EXPERIENCE

OneTriangle (Y Combinator S26) — San Francisco, CA
Founding Engineer — *March 2026 – Present*

- First employee (engineer 1 alongside two cofounders) at a YC S26 AI-agent startup whose product has landed deals with a **Fortune 10 company**
- Sole builder of the entire product and web surface: 240+ TypeScript/React components including 170+ interactive agent-workflow demos across 6 industries (finance, healthcare, insurance, ERP, support, accounting)
- Own everything from product logic to design system: shipped the full site, interactive demos, and brand used to close enterprise and investor conversations

Republic of Korea Army — Yeoncheon, South Korea
Squad Leader & Personnel Administration Specialist — *July 2024 – Jan 2026*

- Led a squad in a top-ranked infantry platoon (1st of 48) in CQB room-clearing competition; completed 19 months of national service

MIT Political History Department — Cambridge, MA
Frontend Developer — *December 2023 – February 2024*

- Built a server-side rendered digital exhibition platform (Next.js) with MIT History faculty; archive of activist murals reached 1,000+ users

TECHNICAL PROJECTS

hwatu — *2026*

- Built a daemon-based WebKit browser in Rust that makes visual verification nearly free for coding agents: **13 ms** median window spawn (p90 35 ms), **216 ms** full verify loop; **75+ GitHub stars**
- Designed the agent-facing control plane: JSON-over-Unix-socket IPC protocol, MCP server over stdio, headless rendering, and human hand-off into a tiling window manager
- Sole author across a 3-crate Rust workspace; **350+ commits** with published engineering writeups and benchmarks

gwae — *2026*

- Built a terminal multiplexer in Rust for running many CLI coding agents at once: an infinite 2D grid of strips where panes never shrink, with quantized scrolling and an OSC 133-based agent-status dashboard
- Single-process, daemon-free design; sole author, **280+ commits**, MIT-licensed with a live in-browser demo (real xterm.js, no server)

Subconscious Hackathon — *May 2026*

- Built an autonomous freight-exception agent in a 2-hour sprint: plan-approve-execute UX on Cloudflare Workers with live SSE trace drafting carrier and customer messages

SKILLS

- Systems: Rust, Linux/Wayland, Unix IPC, daemon architecture, WebKitGTK
- AI Agent Infrastructure: MCP servers, agent memory systems, LLM tool design, RAG-grounded retrieval
- Web: TypeScript, Next.js, React, Python, FastAPI, Cloudflare Workers, AWS, Vercel

HONORS & AWARDS

- AIME Qualifier (American Invitational Mathematics Examination)
- EBS Janghak Quiz national TV competition winner, Korea (2023)
